Resume

I developed business hardware solutions reducing the price of development and programming, optimizing the hardware to receive future technologies with artificial intelligence and giving a clearer vision for the technologies in Linux and opensource software. Work as a senior engineer developing systems and software based on artificial intelligence in python for voice command recognition. develop social media platforms with programming languages and layout with Reactjs, Html, PHP, Firebase. In addition to working on Blockchain projects for companies creating a mainstream within them for the familiarization and cultivation of the Blockchain within companies. Design and development of videogames in android, c #, Python, and Unity 3D in addition to modeling, animating and programming the logic of videogames. I lift architectural bluepints to 3D and Render.
